# Step 4. Uploading Figures, Appendices and Supplementary Files

## You are now submitting to the **JMIR Medical Informatics.**

In this step in the submission process any figure or appendix files included in the manuscript, as well as any other supplementary files (related publications, CONSORT checklists, etc.) should also be uploaded as separate files.*Reacting to feedback by some authors that this is too much work, we now allow initial submissions with no separate figure uploads (i.e. just leave them in the manuscript only). However, please be aware that -- at the latest -- after initial peer-review (when you submit your revised manuscript) you will have to upload each of your figures separately. In order to avoid delays during production we highly recommend to do this already on initial submission, so we can check and comment on the quality of the figures.*We recommend to have no more than 5 figures in your main manuscript (the rest - e.g. a series of screenshots - could go into an appendix, e.g. as Powerpoint file). Manuscripts describing ehealth or mhealth applications should usually have at least one figure showing a screenshot.**Figures**: should be high-quality JPG, PNG or GIF files (no not upload figures as TIF, DOC, PDF or any other file type). The image should not have the figure title/caption embedded in the image; this should be added in the figure metadata (you will be directed to the form to provide this information after selecting a file for upload).**Multimedia Appendices**: in the case of text documents these should be uploaded as Word documents not PDF files.

- SINCE AUG 2011, ALL FIGURES AND MULTIMEDIA APPENDICES AND THEIR CAPTIONS ARE NOW GENERATED AND INSERTED IN THE FINAL PUBLISHED MANUSCRIPT FROM THE DATABASE DURING PRODUCTION. During the review process, leave figures and captions also in the manuscript, only remove them during copyediting.
- Our system/typesetter will insert figures after the paragraph where the figure is first mentioned in the text. Each figure must therefore be mentioned in the text (e.g. "Figure 1 illustrates this, FIgure 2 shows that...")
- Do not use Figure 1a, 1b etc. If figure parts make sense (because they are very small) then author MUST provide ONE figure file with all the figure parts a part of one figure (e.g. merge the figure parts into one figure). If figure parts are new figures, they must be renumbered (Fig 1, 2, 3, ..)
- FIGURE NUMBERS AND CAPTION SHOU
PART OF THE IMAGE (if they are, authors will be asked

Support

1''', '''Figure 2''' etc -these will be added automatically during typesetting. If you add "Figure 1" to the caption, then this will result in a duplicate label ("Figure 1. Figure 1..").

- For the caption, use sentence case (NOT ALL CAPS, Not Title Case, not all small letters) with a period at the end (NOTE: Until Aug 24th JMIR figure captions had no periods at the end. As this is contrary to AMA style, captions from manuscripts copyedited after Aug 24th 2011 must have a period at the end).
- DO NOT include notes at the bottom of a figure (they must be included in the caption or the text). Figures have no footnotes.
- Captions should be succinct. Lengthy explanations should be moved to the body of the manuscript. On the other hand, each figure should be designed so that it can be easily understood by the reader without consulting the main body of the manuscript.

- allowed file extension(s): .jpg, .jpeg, .png, .doc, .docx, .xls, .xlsx, .ppt, .pptx, .pdf, .txt, .zip, .rar, .7z, .mov, .mp4, .avi
- max file size for .jpg, .jpeg, .png, .doc, .docx, .xls, .xlsx, .ppt, .pptx, .pdf, .txt, .zip, .rar, .7z, .mov, .mp4, .avi is 255MB

**Upload supplementary file**

Choose File No file chosen

*Note: File will upload automatically after you chose one from your hard drive*

Please choose file with .jpg, .jpeg, .png, .doc, .docx, .xls, .xlsx, .ppt, .pptx, .pdf, .txt, .zip, .rar, .7z, .mov, .mp4, .avi format only

On confirmation, the validated query triple is stored in Organizational Memory (step 7, dashed line), which informs future queries alongside a Knowledge Base of ontologies and best practices. architecture.mmd.png | | | |
| 2. | **Figure 2**. Six-step Validated Query Cycle for Human-in-the-Loop Knowledge Governance. Step 1 (Query): analyst asks a natural language question. Step 2 (Generation): system generates candidate SQL. Step 3 (Validation): AI explains SQL logic and results; analyst confirms intent. If incorrect, the cycle loops back to Generation. If correct, Step 4 (Storage): validated triple is stored in organizational memory. Step 5 (Retrieval): future queries match against validated triples. Step 6 (Persistence): knowledge survives staff turnover, and new analysts reuse validated queries. Dashed arrows connect the cycle to three outcome pillars: Storage advances | 2026-03-30 | Edit \| delete<br>Change to Figure Number:<br>2<br>Update | |
