

Can Health Systems Keep Analytics Maturity When Turnover Outpaces Documentation?

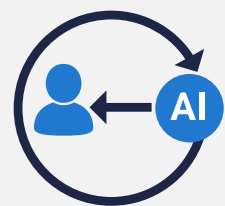

The triple threat

Health care organizations face **low analytics maturity, high workforce instability, and semantic technical barriers**

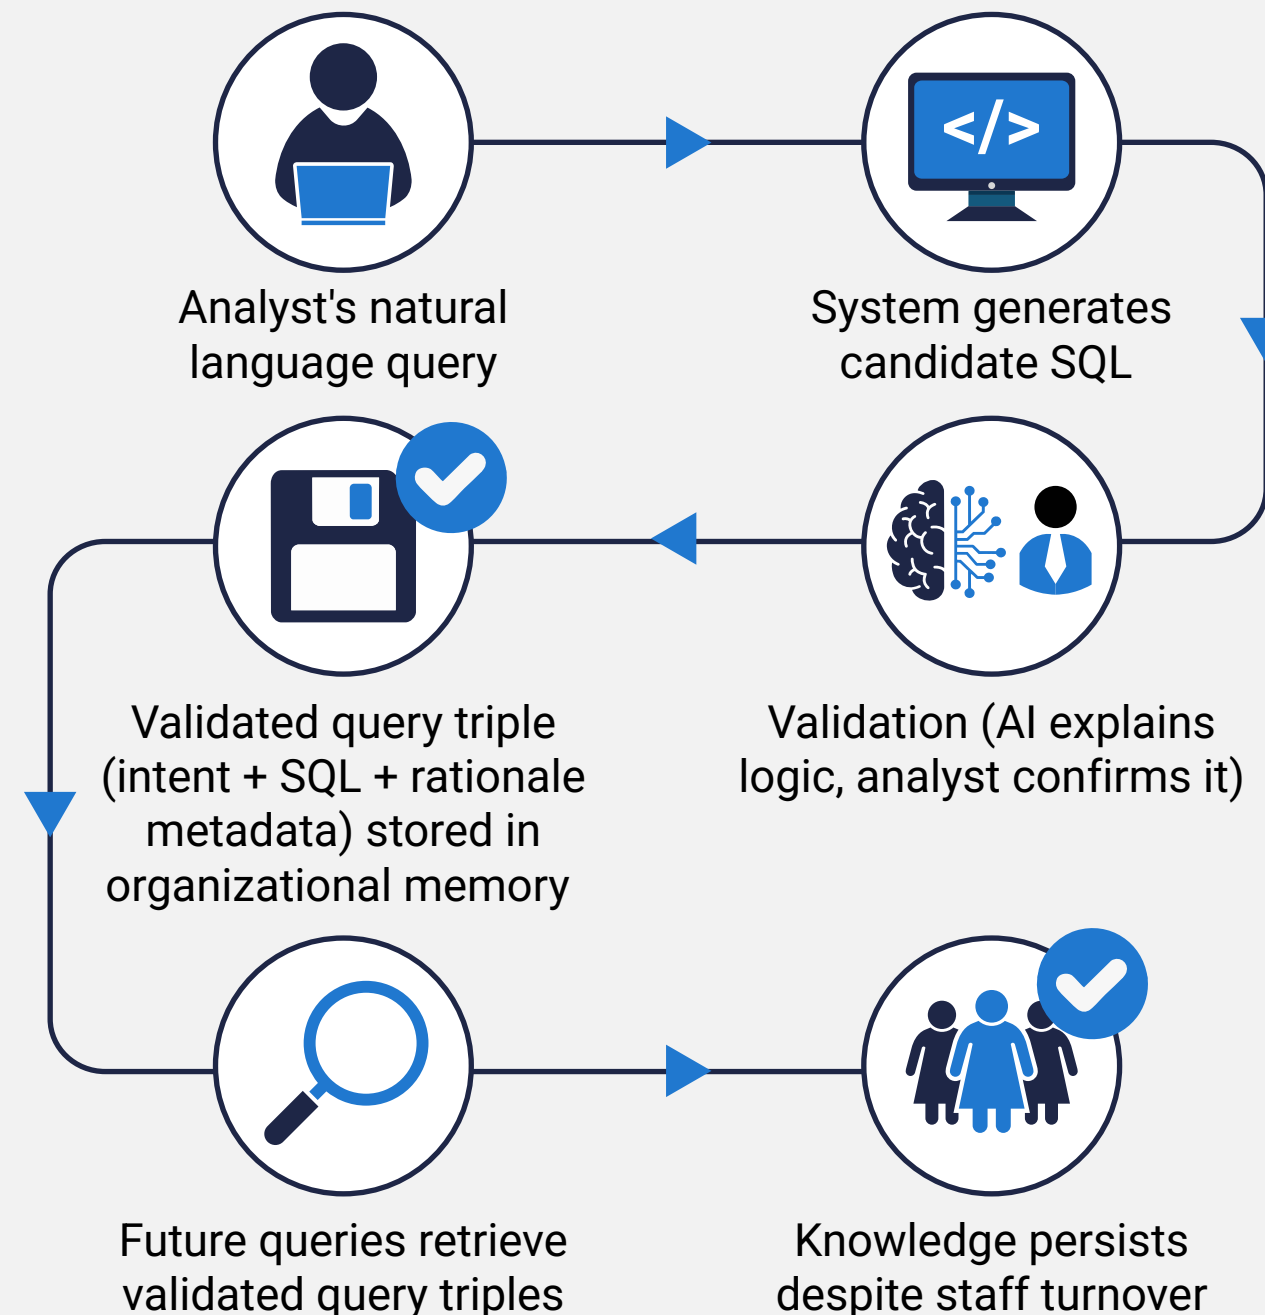

Together, these can drive “**institutional amnesia**”—the loss of **tacit knowledge**

This viewpoint calls for the **Human-in-the-Loop Knowledge Governance (HITL-KG)** framework to shift knowledge from human memory to durable artifacts

HITL-KG framework

Overcoming institutional amnesia

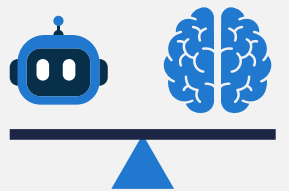

Knowledge ratchet helps prevent loss of **previously validated analytics knowledge**

Knowledge capture becomes part of **everyday analytics work**

AI-generated querying is supported by **human expert validation**

The 3 pillars of health care analytics are supported: **analytics maturity, workforce agility, and technical enablement**

Summary: Validated queries can preserve analytics knowledge beyond staff tenure, helping organizations maintain maturity despite workforce turnover.
